

INTRODUCING: SPARKLE SILVER® Elite Liquid Metal (LM)

Silberline's new SPARKLE SILVER Elite Liquid Metal series are fine silver dollar milled aluminum flakes with a highly polished surface.

These new products can be formulated for use in a multitude of coatings ranging from Automotive OEM, Refinish, Interior Auto, Wheel Coatings, 3C, as well as General Industrial applications.

The Elite series of Liquid Metal flakes is brighter, providing significantly more hiding than the SPARKLE SILVER ULTRA® Liquid Metal series.

When formulated and applied properly, The SPARKLE SILVER Elite Liquid Metal series pigments deliver the look and appearance of Vacuum Metallized Flake (VMF) with the application benefits of conventional aluminum pastes.

Contact your Silberline Representative for more information on these Elite products.

Features and Benefits:

- **High Sheen and Distinctness of Image (DOI)**—Bright highly polished reflective surface with a smooth patina
- **Increased Metallic Travel**—highly polished flake surface with smooth edges allow for more metallic travel
- **Ease of Use**—Application and performance characteristics of a traditionally milled flakes
- **Cost-effective**—Extremely high opacity that provides the appearance of vacuum metallized pigments

Formulation/Applications Guidelines for a Chrome Metal look:

Formulate at a higher P/B (minimum 1:1)

- Formulate at lower solids (less than 5%)
- Apply in multiple thin coats for hiding over a gloss black substrate
- Air spray application provides best flake orientation

Available Products:

1. **SPARKLE SILVER Elite 011 LM (11µm) – formerly known as L-12854**
2. **SPARKLE SILVER Elite 015 LM (15µm) – formerly known as L-12723**
