

Introducing the SPARKLE SILVER® Elite Product Family

In an effort to push the limits for finer and brighter metallic effects, Silberline has developed the SPARKLE SILVER Elite family of aluminum pigments. These products offer excellent face brightness with a deep flop and high gloss.

Employing the latest in advanced milling techniques, Silberline technology has yielded fine silver dollar flakes exhibiting a narrow particle size distribution and more uniform flake surfaces. These products can be used to create brilliant, high gloss masstone silver colors as well as clean and vibrant tints. SPARKLE SILVER Elite pigments are applicable for use in automotive OEM, refinish, and any industrial coating requiring high gloss and brilliant metallic sheen.

Commercially available SPARKLE SILVER Elite products are as follows:

Product	Flake Type	Median Particle Size (d50)	Non-Volatile (by weight)	Carrier Solvent
SPARKLE SILVER Elite 010	Enhanced Silver Dollar, Non-Leafing	10 microns (µm)	72%	Mixture of mineral spirits & high aromatic
SPARKLE SILVER Elite 012	Enhanced Silver Dollar, Non-Leafing	12 microns (µm)	72%	Mixture of mineral spirits & high aromatic

Further developments are currently underway to add additional particle size products to the SPARKLE SILVER Elite portfolio.

See your local Silberline representative for more information on this exciting new product line!
